L2: Entry 1 of 1

TITLE: Family of mammalian potassium for the screening of drugs channels, their cloning and their use, especially

DATE-ISSUED: October 30, 2001

INVENTOR - INFORMATION:

Fink; Michel Duprat; Fabrice Lazdunski; Michel Lesage; Florian CITY Nice Paris Vallauris La Bocca STATE ZIP CODE FR FR FR COUNTRY

536/24.1 US-CL-CURRENT: 435/69.1; 435/320.1, 435/325, 514/44, 536/23.1, 536/23.4, 536/23.5

What is claimed is:

- 1. An isolated and purified nucleic acid molecule coding for a protein capable forming a potassium (K.sup.+) ion channel, comprising two P domains and three c four transmembrane segments. e of
- 2. The nucleic acid molecule of claim 1 coding for a protein wherein the number of P domains is two and the number of transmembrane segments is four.
- The nucleic acid molecule of claim 1 which is human.
- 4. The nucleic acid molecule of claim 1 which is a cDNA copy of a 2.6 kilobase transcript expressed at high levels in the pancreas and placenta, and at lower levels in the brain, lung, prostate, heart, kidney, uterus small intestine and colon.
- the The nucleic acid sequence of claim 1 which codes for a protein which comprises ϵ sequence represented by SEQ ID NO:4.
- 6. The isolated and purified nucleic acid sequence of claim 1 which codes for a protein which comprises the sequence represented by SEQ ID NO:4 or a sequence having the equivalent function of being capable of forming a potassium (K.sup.+) ion channel which comprises two P domains and four transmembrane segments.
- 7. An isolated and purified nucleic acid sequence of claim 2 which comprises an open reading frame (ORF) of 1185 nucleotides.
- The isolated and purified nucleic acid sequence of claim 7 which is human.
- 9. A self replicating vector comprising the nucleic acid molecule of claim 1.
- 10. A cell transformed with the vector of claim 9, which cell is selected from the

group consisting of prokaryotes and eukaryotes

- The transformed cell of claim 10 which is a yeast, insect cell, plant cell or mammalian cell.
- The transformed cell of claim 10 which is a bacterium.
- 13. A method for the expression and isolation of a potassium transport channel encoded by a nucleic acid molecule according to claim 1 in a competent host cell comprising transferring a self-replicating vector including said nucleic acid molecule into a competent host cell, culturing said host cell under conditions allowing the production of the potassium transport channel, and isolating and purifying the polypeptide comprising the potassium transport channel.
